

I'm looking for a front office developer for a Manhattan based client at the moment. The client is a global investment bank based in Midtown Manhattan. The group is looking for a skilled C++ developer with quantitative expertise to work on front office applications. The successful candidate must have experience and proven knowledge in fixed income, and specifically interest rates, swaps, swaptions, bonds, FRAs, Caps/floors, etc. Additionally, experience in emerging markets is also beneficial, as well as technical skills in VBA/Excel. This is a permanent role, and the compensation will be in line with comp history and the competitive market value. Please send me your updated resume if you are interested. And feel free to tell your friends and colleagues. I am urgently looking to fill this role.

Thanks, Kim Kimberly Maher Banking Technology Division Huxley Associates
