

Mayo Clinic in Jacksonville, FL

Department: Biostatistics

Job Summary: The Statistician I functions as a statistical consultant/project manager by applying statistical, computer and scientific expertise to the design, implementation, analysis, interpretations, and reporting of research, clinical and administrative studies. **Organizational relationships:** Receives direction from lead statisticians, principal investigators, and supervisors. Gives direction to statistical programmer analysts, data librarians, data monitors, data entry staff, and programmers, study assistants, data abstractors, summer interns and secretaries. The position also works cooperatively with lead statisticians, physicians, statisticians, statistical programmer analysts, nurse abstractors, study coordinators, medical technicians, and other project team members while maintaining effective collaborative relationships with external agencies, i.e., NIH, drug companies, and cooperative research groups.

Qualifications: Masters degree in Statistics/Biostatistics. Experience in carrying out most phases of statistical analysis, interpretation and report-writing while utilizing statistical computing and data management packages preferred.
