

## Senior Statistician opportunity - Dallas

I am an Executive Recruiter working with a leading financial services company in the Dallas area in their search for a Senior Statistician for their organization. This company is experiencing phenomenal growth and is well-positioned in its segment of the industry. The Senior Statistician functions as a key part of the company's risk group in supervising the development of credit scoring models for this consumer lender. This will include creating scorecards for modeling default and bankruptcy events; developing behavioral scorecards to model various portfolio events in the customer lifecycle; application of statistical techniques on internal data and credit bureau data to analyze trends for risks and opportunities; and utilization of internal and external data sources to create modeling data and use that data to recommend optimal decisions for the business. This role will lead a team of analysts in the scorecard development and monitoring function. Key technical skills include solid work experience using SQL and SAS (SAS Base, SAS/STAT, PROC SQL and SAS Macro programming), as well as MS Office. Also, the ability to merge, concatenate, import/export datasets, clean data and check for data consistency and accuracy. Familiarity with linear regression, logistic regression models, segmentation and variable reduction techniques, hypothesis testing, non-parametric testing, design of experiments, ANOVA, and CHAID analysis strongly preferred. If you are interested in this position or know of someone else whom I should be speaking with about this opportunity, please let me know. Regards, Jon Mlinar Sr Recruiter Burnssearch LLC 6136 Frisco Square Blvd., Suite 400 Frisco, Texas 75034 214-632-5053
