Course Information
Class Meeting Place: OSB 215
Class Meeting Time: Tuesday/Thursday 11:00-12:15

Instructor: Dr. Adrian Barbu
E-mail: abarbu@fsu.edu
Office: 106C OSB
Phone: 850-290-5202
Office Hours: Tuesday/Thursday 2:00-3:00pm or by appointment

Textbooks (optional):
1. Pattern Recognition and Machine Learning by Christopher M. Bishop (publisher: Springer)

All textbooks are optional since the course will not follow any particular book.

Course Objectives: At the end of the course, the student will:
- be able to explain many machine learning methods and their advantages and disadvantages
- be able to implement the methods or know where to obtain them from
- be able to use existing library software
- have a working knowledge of most of the methods
- be able to determine most appropriate learning method for a specific application

Course topics: This course is an overview of statistical methods for supervised, unsupervised and weakly supervised learning. The following topics will be covered:
- Decision Trees, Random Forests
- Naive Bayes Classifiers
- Linear and Logistic Regression
- Generative and Discriminative Learning
- Learning with regularized loss functions
- Neural Networks
- Large Margin Classifiers: Support Vector Machines, Kernel Methods
- Boosting: AdaBoost, LogitBoost, RealBoost, GentleBoost
- Efficient Inference: Marginal Space Learning
- Learning Issues: Overfitting, Bias-variance tradeoff
- Learning Theory: PAC learning, VC Dimension
- Graphical Models, Hidden Markov Models, Conditional Random Fields, Belief Propagation
- Semi-supervised Learning
- Unsupervised Dimensionality Reduction: PCA, Factor Analysis, ICA
- Supervised dimensionality reduction: Feature Selection, Fisher LDA, Hidden layers in NN
- Nonlinear Dimensionality Reduction: Kernel PCA, Multi-dimensional scaling (MDS), Isometric mapping (ISOMAP), Local linear embedding (LLE)
- Maximum Entropy models: FRAME
- Using Incomplete Data: MLE and EM
- Unsupervised learning: K-means, EM, Spectral clustering, Self Organizing Maps
- Reinforcement Learning
- Metric Learning

For each method, examples from different fields such as Natural Language Processing, Bioinformatics, Computer Vision, and Medical Imaging will be presented. Some of the most important methods will accompanied by small projects for a better understanding of their advantages and limitations.

**Grading:** There will be 8 homework projects worth 10-20 points each, depending on each project’s difficulty. The students can choose which projects they want to turn in to reach 100 points.

<table>
<thead>
<tr>
<th>Project</th>
<th>Needs Programming</th>

<tr>
<td>8 Final Project</td>
<td>Yes/No</td>
<td>10-20</td>
</tr>
</tbody>
</table>

Each student should contact the instructor to discuss the topic of his final project. This topic could be suggested by the instructor or by the student, but in the latter case it must be agreed by the instructor.

The following scheme will be used to convert the percentage points to letter grades

- 90-100 A range, 80-89 B range, 70-79 C range, 60-69 D range, 0-59 F range.

**Prerequisites:** STA 3032 and knowledge of Matlab, C++ or other programming language or consent of instructor.

**Course Materials**

- Blackboard class website: go to [http://campus.fsu.edu/](http://campus.fsu.edu/) and login using you ACNS username and password. Homework, datasets, grades, course notes and other course material will be posted there.
Course Policy

- **Classroom policies:** The classroom environment is an important factor for effective learning. In order to not distract other students’ attention please follow these classroom policies. The first one of these is the university policy.
  - Remember that no food or drinks are allowed in the classroom.
  - Turn off all audible alarms (cell phones, pagers, calculators, watches etc.)
  - Do not use cell phones in the class.
  - Come to the class on time. Opening and closing the classroom door in the middle of a class cause distraction to the students and the teacher.
  - Do not talk to other students without permission while the professor is teaching. More than one conversation creates noise and makes it difficult for the students to pay attention to the lecture.
- **Homework:** There will be 8 homework projects, typically due in two weeks from the date they are announced. No late homework is allowed. The homework must be neatly written, preferably typed. Computer output should be kept to a minimum. You are encouraged to submit the project code by email. The best code will be posted on Blackboard to be available for all students attending the class.
- **Code:** It is acceptable to use code downloaded from the internet for the homework as long as a reference to the code website or the appropriate paper is added to the bibliography of the homework.
- **Collecting returned homework:** It is the student’s responsibility to retrieve his or her homework whenever they are returned and to check grades on the Blackboard class page. If you notice any mistake in recording grades on the Blackboard page, please inform the instructor about it as soon as possible.
- **Homework re-grade:** You have one week to request a re-grade of a homework from the date on which the graded homework is available to the students of the class. Submit a written request detailing the nature of the grading error to the instructor along with the relevant homework.
- **Contacting the instructor outside the class:** You are strongly encouraged to come to the instructor during his office hours. If your schedule conflicts with the office hours, you can make an appointment. You may ask the instructor brief questions by e-mail, but you may be asked to come to office hours if the instructor thinks that the questions are better answered in person.
  When you send e-mails remember the following:
  - Always e-mail from your FSU accounts. The e-mails from non-FSU accounts may not reach me due to filters.
  - Always write your full name at the end of each e-mail message you send.
  - Always write the course number at the beginning of the subject line.
- **University Attendance Policy:** Excused absences include documented illness, deaths in the family and other documented crises, call to active military duty or jury duty, religious holy days, and official University activities. These absences will be accommodated in a way that does not arbitrarily penalize students who have a valid excuse. Consideration will also be given to students whose dependent children experience serious illness.
- **Academic honor policy:** The Florida State University Academic Honor Policy outlines the University’s expectations for the integrity of students’ academic work, the procedures for resolving alleged violations of those expectations, and the rights and responsibilities of students and faculty members throughout the process. Students are responsible for reading the Academic Honor Policy and for living up to their
pledge to “. . . be honest and truthful and . . . [to] strive for personal and institutional integrity at Florida State University.” (Florida State University Academic Honor Policy, found at http://dof.fsu.edu/honorpolicy.htm.)

- **Americans with Disabilities Act:**
  Students with disabilities needing academic accommodation should:
  1) register with and provide documentation to the Student Disability Resource center; and
  2) bring a letter to the instructor indicating the need for accommodation and what type.
  This should be done during the first week of class.
  This syllabus and other class materials are available in alternative format upon request.
  For more information about services available to FSU students with disabilities, contact:

  Student Disability Resource Center

- **Syllabus Change Policy**
  Except for changes that substantially affect implementation of the evaluation (grading) statement, this syllabus is a guide for the course and is subject to change with advance notice.
