

Postdoctoral Fellowship in Cancer Research (Biostatistics/Epidemiology) at Stanford University

Stanford University School of Medicine
Quantitative Sciences Unit
Stanford Center for Biomedical Informatics Research

Applications are invited for postdoctoral fellow positions to join Dr. Summer Han's research group in the Stanford Center for Biomedical Informatics Research at Stanford University. This position emphasizes developing and applying statistical methods for analyzing various types of cancer data that include: epidemiological cohort data, cancer registry data, genetic data, and cancer screening data. The projects for this position will include a newly NIH funded study for second primary lung cancer based on >25000 lung cancer cases and controls, whose data have been collected from the International Lung Cancer Consortium (ILCCO)(<http://ilcco.iarc.fr/>).

Specific areas of interest include, but are not limited to, (1) risk prediction modeling; (2) survival/competing risks analysis; (3) cancer screening modeling; and (4) health policy modeling based on simulations. We seek an individual with strong statistical and computing backgrounds. Successful applicants should have a strong background in biostatistics, cancer epidemiology, or genetic epidemiology, and should hold a Ph.D. Strong programming skill in R is required.

Please email a cover letter, CV, and a short description of research interests, and contact information of three referees to:
