STA-3032  Applied Statistics for Engineers and Scientists  
Syllabus  
Fall 2021 - 9111-0001

Meetings: HCB 215 M/W/F 3:05 PM - 3:55 PM  
Instructor: Dr. Jonathan Stewart  
Office hours: Remote – TBA  
Course website: Canvas  
Email: jrstewart@fsu.edu  
Use subject line “[STA-3032]” in all email correspondence.

Course description: STA-3032 aims to provide a calculus based introduction to statistics for students in engineering and science programs. At the end of the course, students should be able to

- Describe basic statistical analysis methods, the assumptions of the methods, and diagnostics for validating assumptions.
- Conduct basic descriptive and inferential statistics procedures.
- Translate scientific and research questions into statistical questions.
- Interpret the results of statistical analyses within the appropriate subject context.
- Outline the capabilities and limitations of using statistics as a means of reasoning about uncertainty and providing answers to scientific questions.

Prerequisites: The course prerequisite is MAC 2312, titled Calculus II.

Students are required to be familiar with derivatives, integrals, infinite series, and other topics in single variable calculus (i.e., Calculus I and Calculus II). I strongly recommend students review their Calculus notes and textbooks early on in the course.

Textbook: The textbook recommended for this course is Statistics for Engineers and Scientists, by William Navidi, 4th Edition. For your convenience, you can find the textbook at Amazon.

An additional recommended text for this course is Statistics: A Concise Mathematical Introduction for Students, Scientists, and Engineers by David W. Scott. This text is beautifully concise, but is more mathematical in its treatment. For your convenience, you can find the textbook at Wiley.

I have copies of both texts and I will bring them to the first day of class.

Assignment submission policy: Every assignment will be issued with a deadline date and time clearly listed on the assignment.

All assignments are to be submitted electronically through the course canvas site assignment page. It is the responsibility of each student to ensure they correctly submit their work on-time.

No late submissions will be accepted for any assignment, quiz, or examination.

Attendance policy: Attendance to lecture is formally required, however I will not be taking attendance past the first lecture (as required by university policy). That being said, I strongly encourage students to complete the required readings prior to each lecture and to attend lecture.

Excused absences include documented illness, deaths in the family and other documented crises, call to active military duty or jury duty, religious holy days, and official University activities. These absences will be accommodated in a way that does not arbitrarily penalize students who have a valid excuse. Consideration will also be given to students whose dependent children experience serious illness.
**Grade policy:** The course is worth 100 total points which are divided into four categories that determine the final letter grade:

- Assignments - 20% of total points
- Examinations - 70% of total points (10% for quizzes, 20% for each of the three midterm)
- Critical analysis project - 10% of total points

Category descriptions:

- **Assignments** will primarily consist of problem sets, may also include course discussion sections, as well as other course exercises.
- **Examinations** include quizzes and three midterms. There will be no final exam in this course.
- **Critical analysis project.** Near the end of the semester, students will select a suitable article to critique from a statistical perspective. Students will use the statistical knowledge they have obtained throughout the semester to perform a critical analysis of their selected article and the usage of statistics or statistical arguments in the article.

Final letter grades for the course will be assigned at the end of the semester. The assignment of letter grades will not be stricter than the following rubric for end of semester point totals:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>[93, 100)</td>
</tr>
<tr>
<td>A-</td>
<td>[90, 93)</td>
</tr>
<tr>
<td>B+</td>
<td>[86, 90)</td>
</tr>
<tr>
<td>B</td>
<td>[83, 86)</td>
</tr>
<tr>
<td>B-</td>
<td>[80, 83)</td>
</tr>
<tr>
<td>C+</td>
<td>[76, 80)</td>
</tr>
<tr>
<td>C</td>
<td>[73, 76)</td>
</tr>
<tr>
<td>C-</td>
<td>[70, 73)</td>
</tr>
<tr>
<td>D+</td>
<td>[66, 70)</td>
</tr>
<tr>
<td>D</td>
<td>[63, 66)</td>
</tr>
<tr>
<td>D-</td>
<td>[60, 63)</td>
</tr>
<tr>
<td>F</td>
<td>[0, 60)</td>
</tr>
</tbody>
</table>

Final point totals will be rounded to the nearest integer.

No grade adjustments will be considered on an individual basis and no extra credit will be provided.

**Policy for collaborative work:** Any work submitted for a grade which permits collaboration is expected to be individually written-up by the student submitting the assignment. While collaboration is encouraged—where allowed—students must write their own solutions and responses. This includes discussion boards, for which copying words or analysis from other students or sources will be considered a violation of the honor code.

**Academic integrity and honor policy:** The Florida State University Academic Honor Policy outlines the university’s expectations for the integrity of students' academic work, the procedures for resolving alleged violations of those expectations, and the rights and responsibilities of students and faculty members throughout the process.

Students are responsible for reading the Academic Honor Policy and living up to their pledge to “... be honest and truthful and ... [to] strive for personal and institutional integrity at Florida State University.” The policy in full can be found at [Academic Honor Policy PDF](click me).
**Americans with Disabilities Act:** Florida State University (FSU) values diversity and inclusion; we are committed to a climate of mutual respect and full participation. Our goal is to create learning environments that are usable, equitable, inclusive, and welcoming. FSU is committed to providing reasonable accommodations for all persons with disabilities in a manner that is consistent with academic standards of the course while empowering the student to meet integral requirements of the course.

To receive academic accommodations, a student:

1. must register with and provide documentation to the Office of Accessibility Services (OAS);
2. must provide a letter from OAS to the instructor indicating the need for accommodation and what type; and,
3. should communicate with the instructor, as needed, to discuss recommended accommodations. A request for a meeting may be initiated by the student or the instructor.

Please note that instructors are not allowed to provide classroom accommodation to a student until appropriate verification from the Office of Accessibility Services has been provided.

This syllabus and other class materials are available in alternative format upon request.
