

University of Florida – Jacksonville
Data Management Analyst II

Job Description: The position of Data Management Analyst II for the Department of Research Affairs is a key position for innovative health sciences research, working as part of the Center for Data Solutions team providing statistical analysis of medium to large size government, national organization and institutional databases. The position will provide leadership in areas of **advanced analytics, particularly machine learning approaches**, data collection, cleaning and data management, as well as serving as a specialist with preparation of grant applications and academic publications. This person will gather information from various sources and interpret patterns providing high level quantitative and qualitative analysis to conduct performance measures, research and projects. The position is expected to provide excellent written and verbal communication, in addition to developing reports and visual representations for a wide variety of clinical/biomedical investigators or other research faculty.

Minimum Requirements: Masters degree in an appropriate area of specialization. Bachelors degree in an appropriate area with at least two years of experience will also be considered.

Preferred qualifications:

- Should excel in and facilitate a collaborative environment, and form data science partnerships with medical academic faculty and departments.
- Excellent technical writing and communication skills.
- Knowledge of principles and theories of statistics and machine learning.
- Ability to plan, organize and coordinate work assignments.
- Ability to work effectively and independently.
- Ability to communicate effectively verbally and in writing.
- Ability to establish and maintain effective working relationships with others.
